PROJECTS

MARC (Metadata Automated Review Checker)

A scalable serverless cloud-native AWS application used by multiple business units across 3 countries which utilizes AWS Textract on drawings submitted to SharePoint sites to retrieve and validate the printed metadata.

Course Scheduler

An AI app built on Java which uses Genetic Algorithm to assign courses and labs of a department to most optimal time slots based on restriction, compatibility, and preferences.

Enrollment Bot

A python script that emulates an API for the university website through reverse engineering and polls availability of courses and automates the enrollment process.

Twitch Signal

A python script that scrapes livestream footage in real-time from a set of twitch channels and identifies if they have a guest celebrity on by running the footage data through a face recognition AI model.
